Version 1 User Manual
Rules that apply to all commands:
* *Use the CMD to enter in all the different commands.*
* *When entering in a date, use the format yyyy/mm/dd, otherwise you will be displayed with an error to put the date in the right format*
* *Once you locate the folder that the program is located in, make sure to run "python main.py" before you enter query, record, priority, or report.*
* *NOTE: when i give examples of what different commands look like, I enclose them in quotation marks (""), you should not include those quotation marks when you are entering in your command on the CMD.*
Query (additional information for Version 2):
* *When querying a tag, you need to make sure you add a colon (:) before the tag. You can write the tag in all uppercase or lowercase, it doesnt matter.*
Record (additional information for Version 2):
* *You can choose to make the tag all uppercase or lowercase, but you must include the colon (:) before.*
Report:
* *A report should be of length 3.*
* *An example of a report is: "report 2023/11/05 2023/11/26"*
* *When making a report the first date must come before the second date or you will recive an error to fix your input.*
* *Dates must be in correct format (yyyy/mm/dd).*
* *You will be returned the rows of each table in the database that has a date recorded within those dates.*
Priority:
* *A priority should be of length 1.*
* *An example is: "priority" (thats the only way to run this command)*
* *You will be returned the table (the tag) in which you have recorded most of your time to.*
* *You will also be returned the top three activities you spent doing.*
* *You will also be returned how much time you have spend doing those activities.*
